### **DETAILED ACTION**

1. This is in response to the communications filed on 16 August 2006.
2. Claims 20-25 are pending in the application.
3. Claims 20-25 have been allowed.
4. Claims 1-19 and 26-41 have been cancelled.

### ***Drawings***

5. The drawings filed on 1 August 200 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

### ***Allowable Subject Matter***

6. Claims 20-25 are allowed.

The current application is directed towards a system at a web site addressable by one or more client computers. Each client computer connects to the web site to receive a respondent identifier and a viewer. The viewer at the client computer generates a unique viewer identifier identifying the client computer, and sends that identifier to the web site for registration with the respondent identifier. The viewer connects to the web site and downloads a file with encrypted content information. The viewer requests the web site for a key to decrypt the file. Based on the respondent and viewer identifiers, and the particular survey and exposure limits, a key is sent to the client computer. The viewer decrypts the encrypted file with the key, and then shows the content information in a window. During viewing, the viewer ignores interrupts from the

computer's user interface enabling copying, and stops showing the decrypted content if another window is selected.

Independent claim 20 describes sending a survey to a computer via the Internet that references a network address to obtain a file for the survey, and downloading that file from the network address.

The closest prior art to the current application was Dedrick U.S. Patent No. 5,710,884. In Dedrick there is only but one user profile transmitted to the user, and later updated to the profile server for each user (see FIG. 9, and column 20, lines 4-28). This is not comparable to the two claimed elements of (i) a survey, and (ii) a file requested for that survey, since in Dedrick there is one user profile transmitted, stored, or updated for a user at his or her client device 12 (e.g. PC). Dedrick does not have each and every element of independent claim 20.

Any claim not directly addressed is allowed on the virtue of its dependency.

*Conclusion*
